1 Exhibition Overview

2020 K-TEXTILE Virtual Exhibition

Due to the sinking global consumer sentiment and the latest COVID-19 pandemic crisis, it is increasingly difficult for buyers and suppliers to interact with each other.

Now that it has become harder to bring recognition of products to buyers, the Korea Textile Trade Association (KTTA) is launching a virtual exhibition that can supplement the limitations of in-person exhibitions in line with the Non-face-to-face era.

K-Textile Virtual Exhibition (KTVE), an innovative online permanent textile exhibition platform, introduces a tangible virtual exhibition method to showcase Korean textiles distinctive from the original shopping mall method.

Check out the making of a new era and the new possibilities through Touch of Connect which 'K-Textile Virtual Exhibition' will provide.

Online permanent exhibition platform

To accommodate the different internet speed environment of the end user, KTVE supports two different versions; High quality and Normal quality. The high-quality version provides an experience with 360-degree virtual exhibition space, whereas the normal quality version brings experience with image collections.

Introduces a tangible virtual exhibition

At KTVE, each of Korea's 51 competitive textile companies exhibits 20 products and provides an indirect experience of real fabric by mapping textile fabrics to virtual clothes through 2D and 3D animation to visually show information on texture, drape, thickness, weight, and color of fabrics.

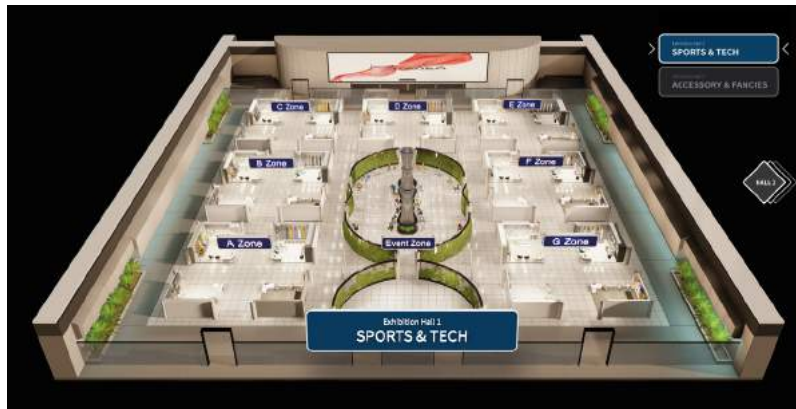

Easy System

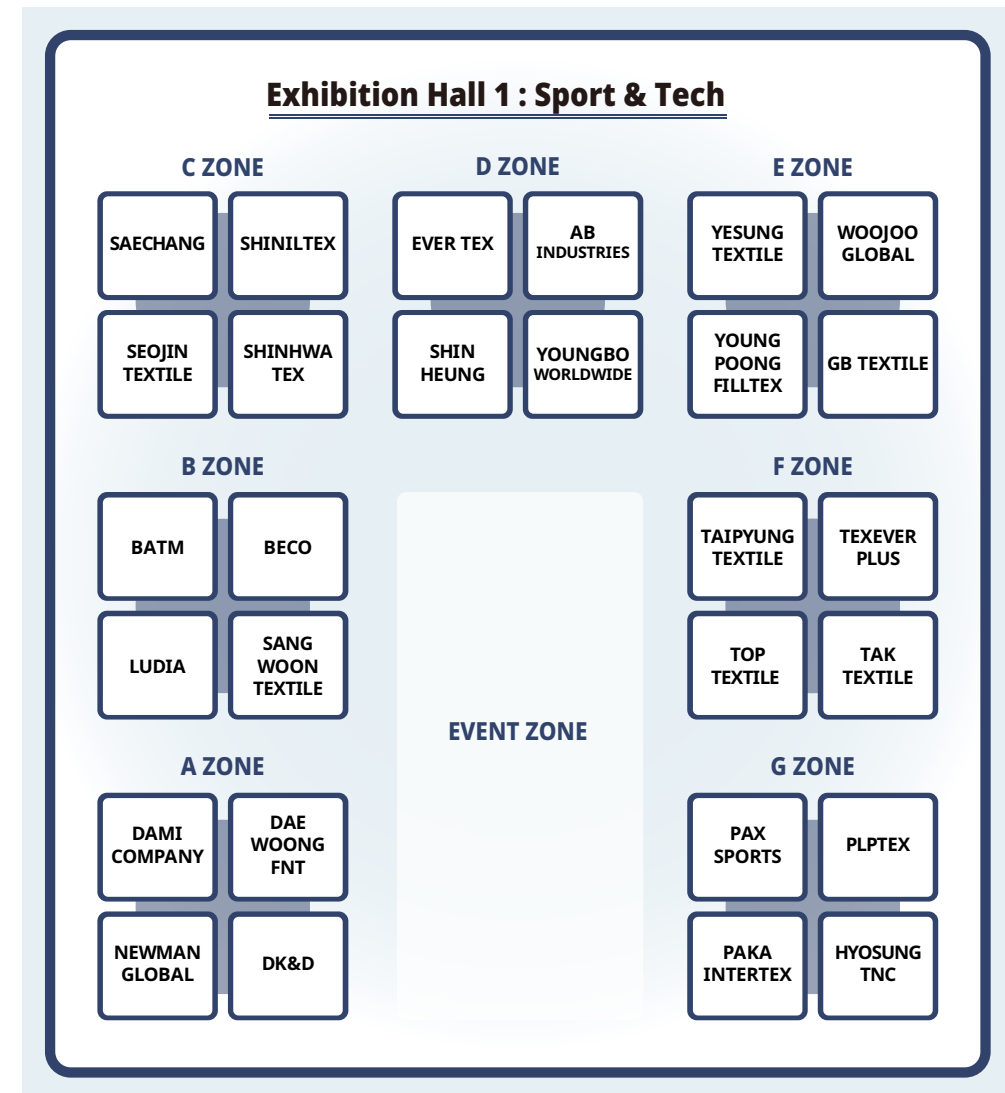

The online exhibition platform integrated a real-time chatting and video service called 'Easy System' allowing communication between users. Also implemented a distinctive search filter functionality to allow quick and easy sample requests, increasing user accessibility.
